## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 20 July 2005 has been entered.

### *Response to Arguments*

2. Applicant's arguments, see response, filed 20 July 2005, with respect to the claims have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

### *Allowable Subject Matter*

3. Claims 1-21 and 23-31 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

#### **[claims 1-16, 18-20 and 24-29]**

Regarding claims -16, 18-20 and 24-29, the prior art does not teach or fairly suggest a CCD mounting for a color line camera which is attached to a prism housing comprising: fastening elements having a length substantially larger than the length of the CCD cell and extending from a housing margin on one side of a light exit surface of a color splitting prism to another housing margin on the opposite side of the light exit

Art Unit: 2612

surface, a first glue joint between the CCD cell and its fastening element, the first glue joint extending along a rear surface and being of a thermally conductive glue, and a third glue joint abutting the fastening element and the margins of the housing, the third glue joint being of a thermally insulating glue as claimed.

**[claims 17, 21, 30 and 31]**

In regard to claims 17, 21, 30 and 31, the prior art does not teach or fairly suggest a method for mounting CCD cells to a color splitting prism comprising the steps of creating a thermally conductive surface contact between a CCD cell and a fastening element which is essentially larger than the CCD cell by joining them together with a first glue, aligning the fastening element with the CCD cell at the correct position at the prism exit surface, gluing the fastening element, while maintaining the obtained alignment of the CCD cell wherein the method further comprises the steps of: creating a thermally conductive surface contact between heat distribution pieces and the ends of the fastening element by joining them together with a second glue; and attaching the heat distribution pieces to the prism housing in a heat-insulating fashion and in order to make the structure rigid.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
